

Turtles are fascinating animals that live in the sea there are many types of turtles for example tortoise, sea turtles and snapping turtles but my favourite are sea turtles for how

unique they are and how they can stay under water for 2 hours without air.

The most popular turtle is a tortoise for how long they can live for. The oldest tortoise is was 189 years old and his name was Tu'i Malila and was born in 1832 and died in 1966

# Turtles

There is lots of cool facts about turtles but my favourite fact is that there is over 350 species of turtles

There is also weird facts about turtles. Like the fact that some species of turtles actually eat other turtles

turtles do not have any teeth but they have a beak like birds so in order to eat food they need to have a very strong jaw.
